

ABSTRAK

ABSTRAK DANNY SYAPUTRA, Analisa Ketepatan Kode Diagnosa Pada Kasus Ibu Melahirkan Di Rumah Sakit Umum Universitas Kristen Indonesia. Karya Tulis Ilmiah, Jakarta : Program D-III Akademi Perkam Medis dan Informasi Kesehatan Bhumi Husada Jakarta Tahun 2022, 37 Halaman, 5 Tabel, 4 Lampiran.

Ketepatan pengkodean adalah pemberian kode diagnosa secara tepat dan benar sesuai dengan ketentuan yang terdapat pada aturan ICD-10. Tujuan penelitian ini adalah untuk mengetahui ketepatan pengkodean diagnosa kasus ibu melahirkan di Rumah Sakit Umum Universitas Kristen Indonesia. Penelitian ini menggunakan metode penelitian deskriptif kuantitatif dengan jumlah sampel 26 ringkasan pulang pasien. Diperoleh hasil, ketepatan kode diagnosa kasus ibu melahirkan 7,69% (2 ringkasan pulang) dan ketidaktepatan kode diagnosa kasus ibu melahirkan 92,31% (24 ringkasan pulang). Ketidaktepatan kode diagnosa disebabkan oleh penulisan diagnosa tidak lengkap terhadap kondisi hamil, metode persalinanan hasil persalinan, pemilihan kode ICD 10 salah, *Coder* tidak menjalankan prosedur pengkodean yang baku. Disarankan penulisan diagnosa kasus ibu melahirkan lengkap meliputi kondisi hamil, metode persalinan dan hasil persalinan, pengkodean diagnosa mengikuti prosedur baku, koding dilaksanakan oleh pengkode professional.

Kata Kunci : Analisa Ketepatan Kode Diagnosa Pada Kasus Ibu Melahirkan

ABSTRACT

Danny Syaputra, Analysis accuracy in coding diagnosas of cases of maternal birth at Universitas Kristen Indonesia Hospital. Scientific Writing, Jakarta: D-III Program of the Medical Recording Academy and Health Information for Bhumi Husada Jakarta in 2020, 37 Pages, 5 Tables, 4 Appendices.

Coding accuracy is the provision of precise and correct diagnostic codes in accordance with the provisions contained in the ICD-10 rules. The purpose of this study was to determine the accuracy of coding the diagnostic of maternal cases at the Indonesian Christian University General Hospital. This study used a quantitative descriptive research method with a total sample of 26 patient discharge summaries. The results showed that the accuracy of the diagnostic code for cases of childbirth was 7.69% (2 summaries of discharge) and the inaccuracy of the code for the diagnostic of cases of mothers giving birth was 92.31% (24 summaries of discharge). The inaccuracy of the diagnostic code was caused by incomplete writing of a diagnosis of pregnant conditions, delivery method and delivery results, incorrect selection of ICD 10 code, coder not carrying out standard coding procedures. It is recommended to write a complete diagnostic of maternal cases including pregnant conditions, delivery methods and delivery outcomes, coding the diagnostic following standard procedures, coding carried out by professional coders
